We Create Marine Solutions

Marine Floats brings together design, consulting, permitting, installation and maintenance services under one roof leading to higher quality, on-budget and on-time project completion. Whether building a new project or replacing an existing structure, we manage the many

details according to your specifications.

Initial Site Visit – The Marine Floats' process begins with a visit by one of our consultants to the proposed location of your project. We take measurements and discuss your vision and needs in detail.

Discovery and Due Diligence – We invest considerable time in researching the best approach to budgeting, designing and planning your project before submitting a proposal for your consideration. We explore alternatives to find the best match to your financial, logistical and aesthetic objectives.

Proposal – We provide a thorough proposal that includes a scale drawing of your project. This proposal includes costs for construction, delivery and installation of your project.

Engineering and Site Plans – We develop for your approval the drawings and site plans required for both permit application and construction/installation. These are reviewed and approved prior to permitting.

Permit Applications – Upon your approval of the contract, drawings, proposal and required exhibits for your project, we prepare and submit all the applications for city, county, and federal permits. While there are many regulatory considerations included in the permitting process, the primary focus is preservation of endangered species.

Dives – A marine biologist completes a comprehensive evaluation of your proposed location as required by reviewing regulatory agencies (June to October).

Hearings – On behalf of clients, Marine Floats attends public hearings at which permit applications are reviewed in order to respond to questions and provide additional information.

Approval – Approvals are granted through collaboration between city, state and federal agencies.

Pile Driving and Construction – Once the project is approved, Marine Floats schedules the required pilings to be installed. According to federal law piling can be driven only between specific months of the year.

Walkthrough – Marine Floats' walks through the completed project with you, the client, for your final approval.
