## Let Marine Floats Take the Hassle Out of Your New Dock or Pier System

*Building a new dock or pier system is no simple task given the myriad environmental and regulatory considerations that affect such projects. Marine Floats' takes the complexities of these projects off your hands by managing all the details of your project.*

**Site Visit** – The Marine Floats' process begins with a visit by one of our representatives to the proposed location of your project. We take photographs and discuss your vision and needs in detail.

**Proposal** – We provide a thorough proposal that includes a scale drawing of your project. This proposal generally includes costs for construction, delivery and installation.

**Contracting** – Once you have approved the design and costs for construction, delivery and installation, we go to the next phase of planning. During the contracting process we research the additional costs of permitting and addressing site issues that might arise.

**Site Plans** – Residential clients must provide a scale drawing of the location of the dock or pier system for the permit process.

**Permit Applications** – Upon approval of the contract and receipt of your site plan, we prepare and submit all the applications for city, county, and national approval.

**Dives** – A marine biologist completes a comprehensive evaluation of your proposed location as required by reviewing regulatory agencies (June to October).

**Hearings** – On behalf of clients, Marine Floats attends public hearings at which permit applications are reviewed in order to respond to questions and provide additional information.

**Approval** – Approvals are granted through collaboration between city, state and federal agencies.

**Pile Driving and Construction** – Once the project is approved, Marine Floats schedules the required pilings to be installed. According to federal law piling can be driven only between specific months of the year.

**Walkthrough** – Marine Floats' walks through the completed project with you, the client, for your final approval.

Enjoy your new floating dock or waterfront solution!
